BEHAVIORS
How to respond when dementia causes unpredictable behaviors

Alzheimer’s disease and related dementias can cause a person to act in different and unpredictable ways. Some individuals with Alzheimer’s become anxious or aggressive. Others repeat certain questions or gestures. Many misinterpret what they hear.

These types of reactions can lead to misunderstanding, frustration and tension, particularly between the person with dementia and the caregiver. It is important to understand that the person is not acting that way on purpose.

Behavior may be related to:

- **Physical discomfort**
  Illnesses or medication

- **Over-stimulation**
  Loud noises or a busy environment

- **Unfamiliar surroundings**
  New places or the inability to recognize home

- **Complicated tasks**
  Difficulty with activities or chores

- **Frustrating interactions**
  Inability to communicate effectively

Use this three-step approach to help identify common behaviors and their causes:

1. **Identify and examine the behavior**
   - What was the behavior? Is it harmful to the individual or others?
   - What happened just before the behavior occurred? Did something trigger it?
   - What happened immediately after the behavior occurred? How did you react?
   - Consult a physician to identify any causes related to medications or illness.

2. **Explore potential solutions**
   - What are the needs of the person with dementia? Are they being met?
   - Can adapting the surroundings comfort the person?
   - How can you change your reactions or your approach to the behavior? Are you responding in a calm and supporting way?

3. **Try different responses**
   - Did your new response help?
   - Do you need to explore other potential causes and solutions? If so, what can you do differently?
Aggression
Aggressive behavior may be verbal (shouting, name-calling) or physical (hitting, pushing). These behaviors can occur suddenly, with no apparent reason, or can result from a frustrating situation. Whatever the case, it is important to try to understand what is causing the person to become angry or upset.

**How to respond**

**Try to identify the immediate cause**
Think about what happened right before the reaction that may have triggered the behavior.

**Focus on feelings, not facts**
Rather than focusing on specific details, consider the person’s emotions. Look for the feelings behind the words.

**Don’t get upset**
Be positive and reassuring. Speak slowly in a soft tone.

**Limit distractions**
Examine the person’s surroundings, and adapt them to avoid other similar situations.

**Try a relaxing activity**
Use music, massage or exercise to help soothe the person.

**Shift the focus to another activity**
The immediate situation or activity may have unintentionally caused the aggressive response. Try something different.

Anxiety or agitation
A person with Alzheimer’s may feel anxious or agitated. He or she may become restless and need to move around or pace. The person may become upset in certain places or focused on specific details.

**How to respond**

**Listen to the frustration**
Find out what may be causing the anxiety, and try to understand.

**Provide reassurance**
Use calming phrases. Let the individual know you’re there for him or her.

**Involve the person in activities**
Try using art, music or other activities to help the person relax.

**Modify the environment**
Decrease noise and distractions, or move to another place.

**Find outlets for the person’s energy**
The person may be looking for something to do. Take a walk, or go for a car ride.
Confusion
The person with Alzheimer’s may not recognize familiar people, places or things. He or she may forget relationships, call family members by other names or become confused about where home is. The person may also forget the purpose of common items, such as a pen or fork. These situations are extremely difficult for caregivers and require much patience and understanding.

How to respond

Stay Calm
Although being called by a different name or not being recognized can be painful, try not to make your hurt apparent.

Respond with a brief explanation
Don’t overwhelm the person with lengthy statements and reasons. Instead, clarify with a simple explanation.

Show photos and other reminders
Use photographs and other thought-provoking items to remind the person of important relationships and places.

Offer corrections as suggestions
Avoid explanations that sound like scolding. Try “I thought it was a fork,” or “I think he is your grandson Peter.”

Try not to take it personally
Remember, Alzheimer’s disease causes your loved one to forget, but your support and understanding will continue to be appreciated.

Repetition
A person with Alzheimer’s may do or say something over and over again – like repeating a word, question or activity. In most cases, he or she is probably looking for comfort, security and familiarity.

The person may also pace or undo what has just been finished. These actions are rarely harmful to the person with Alzheimer’s but can be stressful for the caregiver.

How to respond

Look for a reason behind the repetition
Try to find out if there is a specific cause or trigger for the behavior.

Focus on the emotion, not the behavior
Rather than reacting to what the person is doing, think about how he or she is feeling.

Turn the action or behavior into an activity
If the person is rubbing his or her hand across the table, provide a cloth and ask for help with dusting.

Stay calm, and be patient
Reassure the person with a calm voice and gentle touch.
Provide an answer
Give the person the answer that he or she is looking for, even if you have to repeat it several times.

Engage the person in an activity
The individual may simply be bored and need something to do. Provide structure and engage the person in a pleasant activity.

Use memory aids
If the person asks the same questions over and over again, offer reminders by using notes, clocks, calendars or photographs, if these items are still meaningful to the individual.

Accept the behavior, and work with it
If it isn’t harmful, don’t worry about it. Find ways to work with it.

Suspicion
Memory loss and confusion may cause the person with Alzheimer’s to perceive things in new, unusual ways. Individuals may become suspicious of those around them, even accusing others of theft, infidelity or other improper behavior. Sometimes the person may also misinterpret what he or she sees and hears.

How to respond

Don’t take offense
Listen to what is troubling the person, and try to understand that reality. Then be reassuring, and let the person know you care.

Don’t argue or try to convince
Allow the individual to express ideas. Acknowledge his or her opinion.

Offer a simple answer
Share your thoughts with the individual, but keep it simple. Don’t overwhelm the person with lengthy explanations or reasons.

Switch the focus to another activity
Engage the individual in an activity, or ask for help with a chore.

Duplicate any lost items
If the person is often searching for a specific item, have several available. For example, if the individual is always looking for his or her wallet, purchase two of the same kind.

Wandering
It’s common for a person with dementia to wander and become lost. In fact, more than 60 percent of individuals with Alzheimer’s will wander at some point. They may try to go home when already there or may be attempting to recreate a familiar routine, such as going to school or work.

How to respond

Encourage activity
Keeping the person with Alzheimer’s active and engaged will discourage wandering behavior by reducing anxiety and restlessness. Involve the person in daily activities such as doing dishes, folding laundry or preparing dinner.
Inform others
Make sure friends, family and neighbors know that the person has Alzheimer’s and that wandering may occur.

Make the home safe
Install deadbolt or slide-bolt locks on exterior doors, and limit access to potentially dangerous areas. Never lock the person with dementia in a home without supervision.

Enroll in MedicAlert® + Alzheimer’s Association Safe Return®
MedicAlert + Safe Return is a 24-hour, nationwide emergency response service for individuals with dementia who wander or have a medical emergency. The program provides assistance wherever and whenever a person is reported missing. Learn about MedicAlert + Safe Return and enroll at www.medicalert.org/safereturn.

Trouble with sleep
People with dementia often can have problems sleeping or may experience changes in their sleep schedule. Scientists don’t completely understand why these sleep disturbances occur. As with changes in memory and behavior, sleep changes somehow result from the impact of Alzheimer’s on the brain.

How to respond

Make a comfortable environment
The person’s sleeping area should be at an appropriate temperature. If helpful, provide nightlights or other security objects. Discourage watching television during periods of wakefulness at night.

Maintain a schedule
As much as possible, encourage the person with dementia to adhere to a regular routine of meals, waking up and going to bed. This will allow him or her to sleep more restfully at night.

Talk to a doctor
Discuss sleep disturbances with a doctor to help identify causes and possible solutions. Most experts encourage the use of non-drug measures rather than medication.

Avoid stimulants
Alcohol, caffeine and nicotine can all affect ability to sleep. Avoid them as much as possible to promote better sleep.

If you have questions about your loved one’s changing behavior, the Alzheimer’s Association is here to help. Contact your local chapter directly or call our 24/7 Nationwide Contact Center Helpline, which provides information, referral and care consultation in 140 languages.

10 quick tips to Responding to behaviors

1. Remain flexible, patient and calm
2. Respond to the emotion, not the behavior
3. Don’t argue or try to convince
4. Use memory aids
5. Acknowledge requests, and respond to them
6. Look for the reasons behind each behavior
7. Consult a physician to identify any causes related to medications or illness
8. Explore various solutions
9. Don’t take the behavior personally
10. Share your experiences with others

Provided through a grant managed by the Caregiver Resource Center, O.C., with funds from the California Department of Aging Federal Older Americans Act, allocated by the Orange County Office on Aging as approved by the Orange County Board of Supervisors.

The Alzheimer’s Association, the leading voluntary health organization in Alzheimer care, support and research, is dedicated to finding prevention methods, treatments and an eventual cure for Alzheimer’s.

For reliable information and support, contact the Alzheimer’s Association:
